Projects Worked On :

1. VitaminOcean

Above project is based on E-Commerce web site where user can purchase product using their credit credit cards and debits cards.

URL: <https://vitaminoclean.com>

I work on below modules

1. Buy one Get one offer where user can buy one product and our system provide one product as free
2. User coupons where there are multiple coupons types are available ie free shipping coupon , discount, fix rate coupon based on that user will get the discount
3. Ebay Integration where we are uploading products on ebay store, Stock management etc here is the links : <http://stores.ebay.com/VitaminOcean>
4. Jet store integration where from our admin panel we can add products, manage stocks , Orders , though apis
5. Integrate amazon payment right now this option is only available on admin panel.

Other task

1. Automated Stock management we are managing stock based on Honest green site we our site download excel file from there ftp server and update product quantity on our site
<https://www.unfi.com/honest-green>

- 2.Sorting Searching feature based on solar search

2. AdvoWire by Hire Influence

URL: <https://www.advowire.com>

The project is based on Campaigning in Social Media using top social sites (Facebook, Twitter)

Every user who is connected with AdvoWire has public profile, through which business user can review user's social activeness and allow them to share their campaign on Social Media

I work on below functionality

1. Implements Searching functionality
2. Update user profile image based on selecting network type
3. Sending alerts notification to user when before an events started
4. Sends Mail to user when Item is launch

3. Amazon VendorExpress

This project is based on amazon vendor account handling where user can manage their purchase orders , Invoice and payments catalogs.

This project is bulid on ReactJs as frontend and Rails as backend technology.

Above project is ongoing right now it is development mode

I work on below modules

1. Login and Registration
2. Creating Purchase Order using amazon excel sheet data. Also we made a script which connect amazon sftp server download purchase orders and made an entry in our database
3. Creating Sales Order using predefined excel templates.
4. Creating Invoice and payments based on sales orders in systems
5. Sales, Profit and Products inventory reports
