

**Gaurav Makwana**

Tsukuba, Ibaraki – JAPAN

Email Id: [gauravmakwana93@gmail.com](mailto:gauravmakwana93@gmail.com)

Mobile No: +818071983828

**Professional Experience****December 2015 –Till Date****Vebuin Private Limited**

Main Branch Japan - Vebuin

Ruby on Rails Developer March 2019 - Present

Offshore Branch India- Thinkbiz Technology, Ahmedabad

Ruby on Rails Developer November 2016 – Feb 2019

**Botree Technologies, Ahmedabad -**

Ruby on Rails Trainee December 2015 - October 2016

**TECHNICAL SKILLS**

Programming Language(s):	Ruby
Frontend :	ReactJs
Framework :	Ruby on Rails , Redux, RSpec
Database System: :	Postgres, SQLite, SQL Server 2014
Tools and Technologies :	HTML, CSS, javascript
DevOps :	Docker Basic, ECR , ECS
AWS :	AWS Certified Cloud Practitioner

**Projects****1. Right-on ECommerce site.(Working)**

Technology Used: Rails-6.0.0, Postgresql Database, Elastic Serach, Rest API

Team: 5 Person

Role: Rails backend Developer

URL: <https://www.right-on.co.jp/>

This web application is used for online shopping where user can buy products like clothes and other daily routines items. Application is using various aws services like elastic search, elastic container service, elastic container registry and fargate. Working on below modules.

### **Elastic search.**

Right now we are making right-on ec site product search engine which display product catalog details on right-on ec site. Right now this micro system we are developing and having playing to release in a few months.

## **2. Merchandise Systems for RightOn**

Technology Used: Rails-5.0.0, SqlServer 14 Database, GraphQL, Rest API

Team : 5 person

Role: Rails backend Developer

### **Worked on below modules.**

This system is basically used for product management. System will share product details to different malls like rakuten, right-on it's own e-commerce site. All kind of stuff are done through API.

### **Url:**

right-on: <https://right-on.co.jp/>

rakuten-right-on : <https://www.rakuten.co.jp/right-on/>

Work on below modules

#### **1.Product Tag data**

Each product having it's own tag which indicate different things like size, which material are used special offer etc from our system we generate data for tag for different item sent that data to Tag printing team they will print data and finally that tag will be attached to the product.

#### **2. Image Processing.**

Sending our images to different mall like rakuten and prismatic all kinds of image processing are done in the system. ie cropping, resizing , watermarking etc.

### 3. Sale Promotion.

Rakuten will give a discount on specific products on specified time of duration. Our system will create sales which start on a particular date once sale starts. We send price details to rakuten. Rakuten will update product price once promotion sales are ending. We again send the original price of the product to rakuten so it will update the original price.

Price updates will be done automatically based on the start date and end date.

## 3. VitaminOcean

VitaminOcean is an online store for health care products.

Technologies: Rails-4.2.6, PostgreSQL Database, JQuery, Bootstrap, HTML5, CSS

Team : 3 person

Role: Rails backend Developer

URL: <https://vitaminOcean.com>

work on below modules

#### 1.Discount Coupon

User coupons where there are multiple coupons types are available ie free shipping coupon ,discount, fix rate coupon based on that user will get the discount

#### 2. Ebay Store Integration.

Register product on ebay store, update product managing orders etc.  
through apis

#### 3. Jet Store Integration..

Jet store integration Add products, manage stocks ,Manage Orders , through apis

#### 4. Integrate amazon payment

Right now this option is only available on Test Server for specific users only .

#### **4. Amazon VendorExpress**

This project is based on amazon vendor account handling where users can manage their purchase orders , Invoice and payments catalogs.

Technologies: Rails-5.0.0, PostgreSQL Database, ReactJs

Team : 2 Person

Role: Full Stack Developer(ReactJs as front-end , Rails as backend )  
work on below modules

##### **1. Sales Order Creation.**

Our client has an amazon vendor sales account whenever any customer buy product orders are come on amazon ftp server. I write a script which connects amazon ftp server, takes the excel file and load order data in the system.

##### **2. Profit and loss reports .**

Generated profit and loss reported based on sales

##### **3. User Registration and Login**

#### **5. AdvoWire by Hire Influence**

The project is based on Campaigning in Social Media using top social sites (Facebook, Twitter)

Every user who is connected with AdvoWire has public profile, through which business user can review user's social activeness and allow them to share their campaign on Social Media

Technologies: Rails-4.2.6, PostgreSQL Database, JQuery, Bootstrap

#### **EDUCATION**

→ 2014 to 2016 : MCA ( Master of Computer Applications ) from Dharmsinh Desai University, Gujarat. Aggregate is 70.17 %

→ 2011 to 2014 : BCA ( Bachelor of Computer Applications ) from Dharmsinh Desai University, Gujarat. Aggregate is 76.46 %

#### **Personal Summary**

Makwana Gauravkumar Mafatbhai
